Highest Level Protection for Networking and Data Transit to Replace Legacy VPNs

Offering the security level of a dedicated circuit in a cost-effective SD tunnel. Fortified with stealth and obfuscation, our solutions conceal high-risk network targets, and meet the challenges of heightened cyber threats and financial regulations.

KEY SECURITY FEATURES:

- Patented method of connection that conceals endpoints
- Randomized, evasive routing over a mesh network thwarting quantum harvesting
- Multi-layer encryption (similar to Tor) for de-attribution and MITM mitigation
- Decoy data injection to mask patterns and signatures
- Zero trust architecture with least privileged access
- Minimal latency, high performance

SECURECO is an elite team of innovators and engineers dedicated to creating the most protected and undiscoverable internet connections possible. We offer a next generation replacement for VPNs, cloaking data exchange, services and assets to reduce network attack surface. Trusted by some of the world's most demanding cybersecurity customers, we deliver assured, high performance data transit for enterprise and government.

FINANCIAL SERVICES USE CASES

Secure Links Between Network Assets

Higher security for always-on data sharing for offices, FinTech partners, data centers and cloud Infrastructure, with no sacrifice to performance.

Assured Privacy of PII and Confidential IP

Minimize exposure of private digital data to harvesting and protect customer, trading partner identity using our anonymized, obfuscated connections.

Protected Mobility/Access for VIPs

Ironclad access for clients, admins, and remote or traveling executives, providing insulation from insecure public or home networks.

Securing App to App Data Links

Protected connections between layers of the application stack, or between applications that support business operations.
