

Gain Cyber Warfare Advantage Via Network Stealth & Maneuvers

SecureCo solutions provide evasive routing of non-attributable data communications, using stealth and obfuscation to avoid discovery or disruption, even over hostile networks.

KEY FEATURES

- Guards identity and geolocation of end points and end users, preserving operator safety and assuring anonymity.
- Conceals communications OpSec spikes, eliminating metadata leakage which leads to confidentiality breaches.
- Disguised and evasively routed data channels routed over a resilient mesh network to assure continuity and avoid interference.
- Operates on commodity GOTS/COTS hardware and IoT devices with limited compute and power.

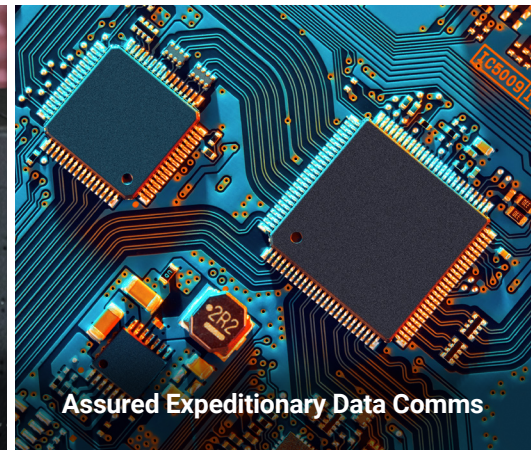

SECURECO is an elite team of innovators and engineers dedicated to creating the most protected and undiscoverable internet connections possible. We offer a next generation replacement for VPNs, cloaking data exchange, services and assets to reduce network attack surface. Trusted by some of the world's most demanding cybersecurity customers, we deliver assured, high performance data transit for enterprise and government.

SECURECO MILITARY & INTELLIGENCE USE CASES

Unobservable, Anonymized Comms

Conceals end user identity, hides identifiable patterns of communication, resists detection and blockage.

Assured Expeditionary Data Comms

Agile installations for field operations, creating secure remote connections in contested network environments.

Secure Mesh of Connected Devices

Low profile software client offers assured connectivity for sensors, autonomous vehicles and weapons systems.

Stealth Network Activity

Enhances network OpSec by reducing attack surface; supports unobservable data transmission or exfiltration.
