

# Ultra Secure Data-In Transit for Water and Wastewater Utilities

The Most Secure and High Availability Networking for IT/OT Convergence using Stealth and Obfuscation Technology

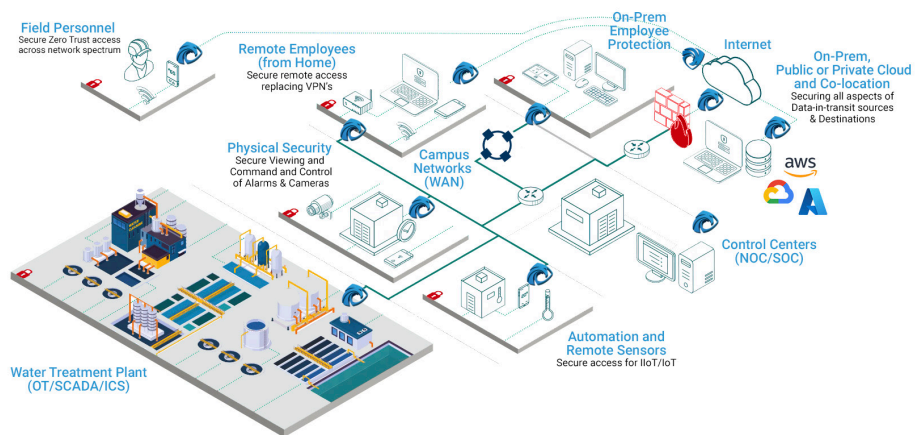

## Addressing an Immediate Cybersecurity Threat Level

Water utilities are prime cyber targets. Projected EPA regulations will provide cyber “guidelines,” but there is no one-size-fits-all approach. SecureCo solutions address the present threat environment, protecting network endpoints and providing obfuscated data transit to make plant operations and controls more resilient and cyberattack resistant.

## Flexible Implementation Supporting Diverse Environments

SecureCo wraps existing network transmissions with advanced data protection without a complex integration. Our cost effective security overlay for your network allows your Utility to meet emerging regulatory standards and accelerates digital transformation.

### Water and Wastewater Utilities – Proactively Reduce Your System Vulnerability

## Key Benefits:

- **Superior Performance with High Availability and Resilience** – Redundancy with no central points of failure, low latency
- **Protection of Endpoints, API’s & End Users** – Security management with micro-segmented zero-trust network perimeters and assured secure connectivity for remote personnel, meters, sensors and Command and Control ops
- **Superior Confidentiality** – Thwarts observation of data stream
- **Untraceability** – Misattribution, hiding digital footprint and Geo

**SECURECO** is an elite team of innovators and engineers dedicated to creating the most protected and undiscoverable internet connections possible. We offer a next generation replacement for VPNs, cloaking data exchange, services and assets to reduce network attack surface. Trusted by some of the world’s most demanding cybersecurity customers, we deliver assured, high performance data transit for enterprise and government.
